# PRESS RELEASE

## Mach Machine Continues Expansion of Production Capabilities

Hudson, MA; October 27, 2015: Mach Machine, Inc. continues to expand its production capabilities with the addition of an Okuma Genos L300-MYW. This new dual spindle turning center will come equipped with a Kitagawa 10" chuck on the main spindle, and a 6" on the sub spindle with max rpm of 3000 and 6000 respectively and a max turning diameter of 15.35" and length of 14". This new Okuma will include both radial and axial live tooling with a Y axis for advance off center slotting. Harmonic speed control which enables unsupported chatter free turning at ratios of 18-1 (length-diameter). Built on thermally stabilized, all box way construction for the ultimate in rigidity and utilizing absolute position encoders this Okuma will maintain position accuracy of 0.0001" 24/7. Fed by an Edge Technology bar loader with a 4 foot magazine and exits with an auto parts catcher and exit feed conveyor table, the Okuma L300 will be able to run lights out all while being able to manage finished parts. Since its controller is Ethernet equipped, the L300 will be able to maintain constant status contact with production management during all hours through both traditional login and sent text messages..
